

ISISDraw sketch file - SKC

The SKC format of ISIS/Draw is imported and exported by Marvin. Most properties of atoms, bonds, groups (R-group and S-groups), query structures and reactions are supported.

Export and Import

The main features:

- Chemical structures (atom properties, labels, bond types)
- Formatted text
- R-groups
- S-groups
- Atom and bond query properties
- Graphical objects (rectangle, ellipse, graphical brackets)
- Reactions

Read the detailed [import](#) and [export](#) list.

Code: **skc**

Extension: **.skc**

Note:

- Some graphical object or objects properties are not available in Marvin (e.g. graphics arc, line style of graphical objects and underlined text).
- Graphical brackets are not supported by ISIS/Draw, thus all brackets are imported as S-groups.
