

Deployment Guide

The guide describes the steps that are necessary in order to deploy Compound Registration in an empty environment.

In the first chapter you will find information regarding the minimum system requirements and the necessary environment to be able to install Compound Registration. The second chapter describes how to set up an Oracle or MySQL database. The next chapter helps you to configure your application server, and the last two chapters provide information on the installation process.

Wizard

Installation steps:

1. [Installation requirements](#)
2. [Database setup](#)
3. [Deploying the application](#)
4. [Compound Registration Wizard](#)
5. [Upgrade guide](#)
6. [Command Line Tools](#)

Warning

Since version **17.06.12-1738** , a home directory must be set for Compound Registration.
